

# DSCL24 (Single Channel)

Jumper Configurable Isolators - DIN or Panel Mount

## Description

Each single channel DSCL24 module provides up to 36 different configurations of process current or voltage inputs and outputs. A unique snap-in tool allows quick extraction of the module's circuit board to permit the user to reposition four (4) jumpers and reconfigure each module's I/O. The factory default setting provides 4-20mA input and output current.

Each module provides full 3-way isolation with 2300Vrms CMV input to output and 3700Vrms CMV power supply to I/O protection (Figure 1). Two module versions are offered that accept universal power supply of either 24 to 60VDC or AC and 85 to 230VDC or AC with the alternating current usage accepting 45 to 400Hz power.

 (1) Thirty-six unique I/O ranges are jumper configurable. See Tables 1 & 2 for configuration options.

**Configuration Guide**

The default setting of factory stock modules is 4 to 20mA for both module input and output, that is, jumpers are inserted in positions B1 and B4 designating 4-20mA input and jumpers ST4 and ST3 are in position for current output.

However, the output can be user reconfigured for an alternative voltage or current signal by inserting the plug-in jumpers ST4 and ST3 in the appropriate positions shown in Table 1.

NOTE: B1 through B6 Jumpers marked on PC board

Jumpers B1 to B6 (Table 2) are used for selecting the standard configurable ranges. Providing that the 'Span' and 'Zero' potentiometers are not adjusted, changing the range has no effect on the modules' accuracy. The 'Span' and 'Zero' allow  $\pm 10\%$  adjustments.
